More than 8 million tons of plastic enter the ocean every year.

Over 5 trillion pieces of plastic are floating in our oceans.

The ocean gives life to millions of creatures. Plastic pollution takes it away.

35% of seabirds and 12% of marine mammals ingested plastic, and 1.6%, and 0.7% died from plastic, respectively.

Nearly 1,300 documented marine species has ingested plastic.

How can we protect the animals?

Use reusable bottles, bags, and containers

Recycle properly

Clean up litter before it reaches the ocean
